We are looking for a Product Specialist in Europe

Since launching the Evosep One system at HUPO 2017, we have made several installations and see increasing demand in Europe. Therefore, we are looking for a Product Specialist (aka Field Marketing person) to assist our customers with application support and provide internal support for our sales team.

Responsibilities

- Support Evosep One users as a domain expert in LC-MS and proteomics.
- Support our sales team with product expertise and scientific presentations.
- Respond to customer inquiries and troubleshooting requests.
- Plan and provide user-training at customer sites.
- Represent Evosep in a few longer-term scientific collaborations.

Qualifications

- B.Sc., M.Sc., or Ph.D. in Analytical Sciences, Biochemistry or related fields.
- 3+ years of hands-on experience with LC-MS instrumentation for proteomics.
- Commercial experience will be considered a plus.
- Excellent communication and "people" skills are essential. This goes for both writing and presenting skills, as well as listening and interaction skills in general.
- Moderate to frequent travel may be required within Europe, as well as occasional international trips.
- When not traveling, you must be able and motivated to work from home.

If you are interested in learning more or want to submit an application, please contact CEO Christian Ravnsborg at cr@evosep.com or phone +45 26 33 20 21.

About Evosep

At Evosep, we are a small but very dedicated team with a long history in the nanoLC and proteomics community. Despite our long history, we are very much a start-up company and like to be fast and flexible while maintaining a high degree of integrity and quality in everything we do. We value an informal and constructive tone both internally and when working with our users. We are not perfect (and neither are you) but we enjoy the quest for high performance (and so should you).

The company is headquartered in Denmark, but our customers are evenly split between Europe and North America.

*Evosep aims to improve quality of life and patient care
by radically innovating protein based clinical diagnostics.
We will make sample preparation and separation for
MS analysis 10 times faster and 100 times more robust
in order to enable truly large cohort studies and
provide the foundation for precision medicine.*
