

WE ARE LOOKING FOR THREE BRILLIANT PROTEOMICS SCIENTISTS

Do you have hands-on experience with LC-MS instrumentation for proteomics? Then you might be one of the new Proteomics Scientists we are looking for.

We developed and launched the Evosep One chromatography system with plans to dramatically expand the possibilities in the field of clinical LC-MS. Those plans are unfolding rather nicely and we are now seeking new colleagues to achieve even more.

So we wish to expand the team at our Odense office with three Scientists, who can help develop and evaluate new hardware, applications, protocols, and methods.

Who are we?

Evosep is only five years old as a company, but most of our employees have a long history within nanoLC and proteomics. Our expertise within the field made it possible for us to bring the Evosep One to market at HUPO 2017 in Dublin just one and a half years after Evosep was founded. Our mission at Evosep is to improve quality of life and patient care by radically innovating how protein based clinical diagnostics are performed. To do so, we engage in collaborations with world-leading scientists about developing new technologies and solutions to make sample separation 10 times faster and 100 times more robust than today's alternatives.

Responsibilities

- Develop and test new separation methods and workflows for LC-MS.
- Support and conduct in-house research and development projects in general.
- Create and maintain application documentation, protocols and scientific literature.
- Represent Evosep scientific collaborations.
- Help fight the fires that inevitably happen when you least expect them.

Qualifications

- B.Sc., M.Sc., or Ph.D. in Analytical Sciences, Biochemistry or related fields.
- 3+ years of hands-on experience with LC-MS instrumentation.
- Experience with automation and robotics will be considered beneficial.
- Excellent communication and "people" skills are essential. This goes for both writing and presenting skills, as well as listening and interaction skills in general.
- Moderate travel will be required within Europe, as well as occasional overseas trips.

What we offer

- A team of passionate colleagues who are all working for a cause. You will contribute to improve and develop quality of life and patient care and be a part of an innovative and collaborative culture in an ever-evolving industry.
- A work environment where freedom under responsibility is key. We expect you to be dedicated and deliver results and in return you will have flexibility to schedule your work and optimize your work-life balance.
- An encouraging and informal tone, both internally and when working with our users. You can go a long way with constructive communication.
- A small company with a global reach. You will have several colleagues working abroad and we prioritize a strong communication with our team across the world.

We are not perfect (and neither are you) but we enjoy the quest for high performance (and so should you).

If you are interested in learning more or want to submit an application, please contact Ole Vorm at ov@evosep.com or phone +45 26 33 23 23.
