

EVÖSEP

Standardization is key

The Evosep One provides a standardized solution with excellent reproducibility both “run-to-run”, “column-to-column” and “instrument-to-instrument”, facilitating individual studies and multi-site collaborations alike. Our matched and optimized columns and emitters are key to achieving this and the pre-mounted connection fittings are finger-tight and dead volume free.

ENDURANCE

The Endurance line is used in our standard methods for robust, reproducible performance at ambient temperature **everywhere, for everyone, every time.**

PERFORMANCE

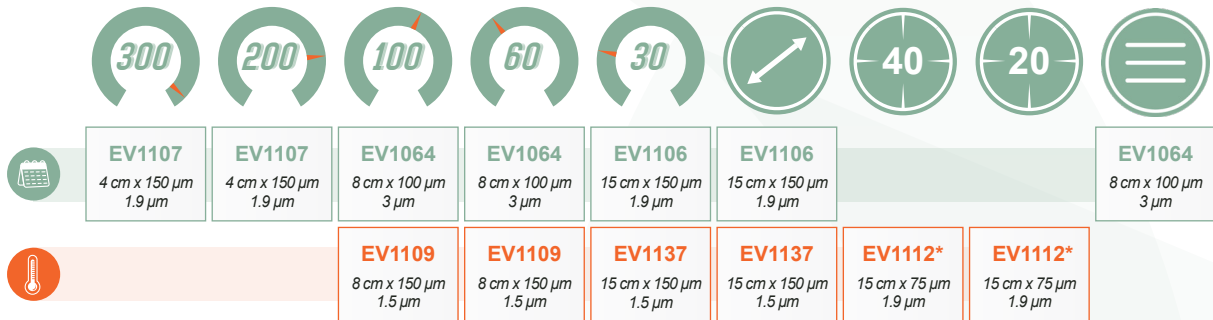

The Performance line is for exceptional results, but also puts some demands on usage such as **requiring elevated column temperature control** to manage system backpressure.

Matched columns

Our analytical columns come with pre-mounted connection fittings. The recommended column for each of our standard methods and EVÖSEP+ methods is listed here.

* Use only with EV1111 emitter

Emitters

Evosep emitters are designed with either stainless steel or fused silica and come with integrated liquid junctions for easy zero dead volume, finger tight connections in our source adapters.

Open-ended columns

All our columns come default with fittings for our own emitters and spray adapters, but when those are not appropriate, you can find open-ended versions (marked OE) of our columns for connecting to your own spray solutions.
